

# Unmask Your Voice

## Be heard clearly no matter what

In these unprecedented times, staying safe means being prepared. As schools begin to reopen under new guidelines to support the health and safety of both students and staff, teachers will face new hurdles. From holding class in larger environments that allow for social distancing to communicating through PPE, many schools are finding that implementing classroom amplification systems with teacher microphones are a big part of their success plan.

## Can your students understand you?

Research has shown that students routinely miss up to 25% of what their teacher is saying. Lip reading can often supplement speech understanding, by using prior knowledge to fill in the gaps of the message being communicated. With a mask, students miss out on these context clues, making it harder to learn. Amplifying the teachers voice can help overcome this very visible barrier to learning.

## Get an affordable solution fast

FrontRow Juno amplifies teachers and instructional media, sets up in minutes, and evenly fills your classroom with the kind of sound you'd expect from a larger installed system. Juno connects you to exciting tools like automated lesson capture and voice control of displays. Juno comes with FrontRow's 3rd generation Teacher Microphone and can be expanded to become a part of your school's bell and intercom system.
