

Encore Software

Effortless Classroom AV Control

Two of the most common frustrations of teachers and technology directors: losing remotes, and managing classroom AV.

Encore makes it easy to control classroom AV devices right from the teacher's PC or Mac. As part of a FrontRow ezRoom, Encore is the perfect compliment to a CB2000 keypad control panel or CB6000 control panel, with the ability to match the look and feel for easy training and daily use.

Encore can even go beyond basic control. When used with Conductor, it can call the office or even trigger an alert to administrators. Encore can even act as digital signage on the teacher's computer, displaying full screen and up front emergency instructions when it gets an alert code from Conductor.

Designed for easy deployment on hundreds of computers, you can create your own installer to automate licensing and defaults. Get the most powerful desktop control application on the planet.

The addition of the optional CMBT Bluetooth® audio receiver and CB55 wall-mounted volume control makes it simple to pair devices, set the appropriate volume level, and add additional wired audio sources, allowing instructors to conveniently use audio from phones, TVs, tablets and other Bluetooth-enabled devices to support their lessons.

Part # ENC-CB (when purchased with a FrontRow control panel)

Part # 821-2000-200 (when purchased standalone)

Part # TSG-ENC (Let FrontRow build your custom layout)

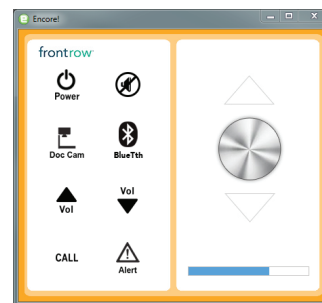

Requirements

System requirements: Windows XP or later. MacOS X 10.6 (Snow Leopard) or later.

Licensing and Update Service: Available on FrontRow DRS-5000.
