

# Analog Page Override for CM3000 (TB13)

310-2546-134

The TB13 Analog Page Override Adapter is used with the CM3000 network amplifier to mute other classroom audio sources when a page is detected from an analog paging system. This allows your FrontRow classroom audio system to integrate with your existing analog system and provide greater intelligibility and a safer environment for students and staff in the event that emergency communications are required.

Install the TB13 in every classroom where the CM3000 will be located if there is a 70V or 100V speaker present to ensure announcements and intercom sessions can be heard clearly and effortlessly.
