

Pro Digital integration tips

Your FrontRow Pro Digital system is the audio center of your classroom! Connect your computer, TV, VCR, computer, CD player, MP3 player and other teaching technology to your system to allow children to hear the teacher's voice and the rich multimedia content that is being played, regardless of where they're seated and with the optional CMBT Bluetooth® audio receiver, teachers can wirelessly play audio for the entire class through their Pro Digital system.

The Pro Digital receiver has two auxiliary audio inputs and the ITM-02 Pendant Microphone has one auxiliary audio input. They both use industry standard connectors and ship complete with the necessary audio cables. Integrating your classroom couldn't be easier!

And don't forget, with the FrontRow Pro Digital receiver you can now Podcast by connecting the "Audio Out" from the receiver to the "Audio In/Microphone" to the computer. See our other guide "Podcasting with the FrontRow Pro Digital" for more information.

Many classrooms use a computer as a multi-media "hub" (with an LCD projector or TV), which is connected to the internet or school network to download/stream audio and video, and also play MP3 files. For these classrooms, you may only require one auxiliary audio input connection to the Pro Digital. The other audio input can be connected to other media or the optional CMBT Bluetooth audio receiver.

NOTE: Connect the "Audio Out" from the Pro Digital to the "Microphone" input on your computer (for podcasting).
